Regulatory Information

Indications for Use

The Vivid Intraoral Video Camera is intended to provide a dentist with the ability to view the oral cavity prior to and subsequent to dental procedures.

ContraIndications: None

Warnings & Precautions

Do not heat sterilize or autoclave any part of the Vivid camera as such cycles will damage the optics and void the warranty.

Do not submerge the handpiece in any liquids.

Safety Information

Safe Use of the Vivid Intraoral Video Camera

	CAUTION! Service of a Vivid camera must be performed by Progeny Dental or an authorized service representative. Do not attempt to service this system unless you are qualified to do so.		
General	The Vivid Intraoral Video Camera has been designed for safe operation within the guidelines of normal daily use. However, as with any electronic equipment, certain precautions must be observed. Use of the system outside of the specifications detailed in this instruction guide may result in permanent damage to the system.		
Read the Guide	Users must employ every precaution to ensure personnel safety. Users should read the guide in its entirety before installing and using the camera. In addition, the user must be familiar with and follow the cautions presented in this guide. If you have any difficulty following or understanding the instructions, contact your dental equipment dealer or Progeny Dental.		
Accessories	All accessories or devices connected to the Vivid camera must meet equivalent safety standards and requirements, specifically EN60601.		
Cleaning	Unplug the system before cleaning. Do not spray any aerosol or non-aerosol sprays into the Vivid camera. When necessary, wipe off exterior with soap and water on a damp cloth. Sterilization or disinfecting should be done only as recommended in Infection Control on page 44.		

Disinfection	It is essential that the handpiece be disinfected thoroughly to prevent cross- contamination between patients. For complete information, refer to Infection Control on page 44.
	Do not heat sterilize or autoclave any part of the VIVID camera as such cycles will damage the optics and void the warranty.
Damage Requiring Service	 If any of the following conditions occur, disconnect the system and refer servicing to Progeny Dental: The power cord or handpiece cable is cut, frayed, or otherwise damaged. The Vivid camera is immersed into a liquid. The handpiece or USB video converter has been cracked or damaged. The system exhibits an unusual change in performance.
Lightning	During a lightning storm or when it will be unattended and unused for long periods of time, the computer system to which the Vivid camera is connected should be disconnected from the wall outlet.
Cable Protection	The USB and handpiece cables should be routed so they are not likely to be stepped on, pinched, or kinked by items placed upon or against them. This may damage the cords and prevent the system from working properly.
	CAUTION! The Vivid Intraoral Video Camera is not suitable for use with flammable anesthetics.

Product Description

Components of the Vivid Intraoral Video Camera

The Vivid Intraoral Video Camera is a state-of-the-art dental video camera. When used with a compatible software application, the operator will be able to capture and store video images into a patient's file. The Vivid camera consists of the components shown on the following pages.

Figure 1 Vivid Camera Handpiece and Cable

Figure 2 USB Video Converter

Figure 3 USB Cables

Installation Procedures

1

Installation Overview

Installation Process	 The Vivid camera is installed in the following steps: 1. Installing Vivid camera drivers to the computer 2. Installing Vivid camera hardware 3. Verifying the Vivid camera video operation 4. Integrating the Vivid camera with dental office systems 5. Adjusting and/or calibrating color
Installation Time	The Vivid Intraoral Video Camera has been designed to be installed by one person in less than one hour, assuming that PC requirements have been met.

System Requirements

	The Vivid Intraoral Video Camera is intended to be connected to a desktop or laptop computer system via USB. Successful computer integration can only be accomplished by ensuring that the system meets the following requirements.		
Personal Computer	CPU Operating System PC Interface RAM Video Resolution CD-ROM	Pentium 4, 2 GHz or higher Windows XP, Vista USB 2.0 port (1 or 2) 256 MB 1024 x 768, 24-bit color CD-ROM drive for installation	
Image Management Software	 The Vivid Intraoral Visstreaming video software the following applicat Patterson EagleS Dentrix Clarity Implication 	deo Camera is designed to work with DirectX 9 compliant vare applications. The Vivid camera has been tested with ions: Soft Imaging aging Module

Installing the Vivid Camera with a USB Hub

,	
	Installing the Vivid camera with a USB hub requires one USB 2.0 port to which the Vivid camera will remain connected. USB technology requires reinstallation of the Vivid camera if the camera is unplugged and then plugged into a different USB port. Using a USB hub is useful if the computer's USB ports are needed for other devices.
Plug and Power USB Hub	 Connect the USB cable to the computer and to the hub. Connect the hub power supply to the hub. Plug the power supply into a wall outlet.
Insert the Installation	Note: Do not connect the Vivid camera or cables to the hub until told to do so by the installation program.
	1. Place the Vivid camera installation CD in the computer's CD-ROM drive. The Welcome screen will appear.
	Progeny Vivid Camera Driver Installation
	progeny-
	Welcome to Progeny Vivid Camera Installation
	Click Next to continue
	Exit Copyright 2006 All Rights Reserved, Progeny, Inc. Version 1.0.0

2. Click **Next**. The installation options will appear.

The following options are available:

- Readme—This option opens the installation instructions, if the Adobe Acrobat Reader software is installed on the computer. An option to install the Adobe Reader from the CD-ROM is available if it is not already installed on the computer.
- Install Progeny Vivid Camera Driver—This option installs the Vivid camera drivers, test programs, and documentation to the computer
- Install Progeny Vivid Camera Hardware—This option installs the Vivid camera hardware on the computer
- Testing Video and Capture Button—This option permits verification of the Vivid camera basic function prior to integration with a dental office application

Installing the Vivid Camera Driver to the Computer

1. Click Install Progeny Vivid Camera Driver. The Vivid Camera Driver

- 2. Click Install Drivers. The EULA (End User License Agreement) will appear.
- 3. Click Accept. The InstallShield Wizard will appear.

InstallShield Wizard		×
	Welcome to the InstallShield Wizard for USB Video/Audio Device Driver	
	The InstallShield® Wizard will install USB Video/Audio Device Driver on your computer. To continue, click Next.	
	< <u>B</u> ack (<u>Next</u>) Cancel	

7. Select Yes and click OK. The computer will shutdown and restart.

Installing the Vivid Camera Hardware	1. 2. 3.	With the installation CD-ROM still in the computer's CD-ROM drive, log back into the computer. The Progeny Vivid Camera Driver Installation Welcome screen will appear. Click Next . The list of installation options will appear. Click Install Progeny Vivid Camera Hardware . The Install Progeny Vivid Camera Hardware screen will appear.

6. Select **Install the software automatically** and click **Next**. A hardware installation warning will appear.

- 8. Click Finish.
- 9. In the Progeny Vivid Camera Setup screen, click Next.

Connect the Vivid Camera Cables	 Connect the Vivid camera cable to the Vivid camera handpiece. Connect the other end of Vivid camera cable to the USB video converter. The light head on the Vivid camera handpiece should light up at this time.
	The installation is complete. Proceed to Verifying Video on page 24.

Installing the Vivid Camera Directly to the Computer

Install the Vivid camera directly to the computer if the computer has two USB ports to which the Vivid camera will remain connected. USB technology will require reinstallation of the Vivid camera if the camera is unplugged and plugged into a different port*. If the computer's USB ports are needed for other devices, install the Vivid camera using a USB hub as described on page 8.

Insert the Installation CD-ROM **Note:** Do not connect the Vivid camera or cables to the computer until told to do so by the installation program.

1. Place the Vivid camera installation CD-ROM in the computer's CD-ROM drive. The Welcome screen will appear.

2. Click Next. The installation options will appear.

***NOTE:** Color coding labels are provided to mark the cables and USB ports.

The following options are available:

- Readme—This option opens the installation instructions, if the Adobe Reader software is installed on the computer. An option to install the Adobe Reader from the CD-ROM is available if it is not already installed on the computer.
- Install Progeny Vivid Camera Driver—This option installs the Vivid camera drivers, test programs, and documentation to the computer
- Install Progeny Vivid Camera Hardware—This option installs the Vivid camera hardware on the computer
- Testing Video and Capture Button—This option permits verification of the Vivid camera basic function prior to integration with a dental office application

Installing the Vivid Camera Driver to the Computer

1. Click Install Progeny Vivid Camera Driver. The Vivid camera Driver

Testing Vivid Camera Video and Image Capture

window will appear.

Vivid Camera Testing Screen The Progeny Vivid Camera Installation program contains the Testing Video and Capture button screen to verify Vivid camera video and image capture.

Start menu, select Progeny Vivid > Test Video with AMCap. An AMCap

- 2. From the Devices menu, select Progeny Vivid USB Camera.
- 3. From the **Options** menu, select **Preview**. The image from the camera will appear in a window like the one above.
- 4. After verifying that an image appears, close the AMCap window by clicking the **x** button in the upper right corner.

Verify the Capture Button

The image capture button on the Vivid camera works through the camera's USB game pad interface. Use the Progeny Vivid Camera Testing screen or, from the Start menu, select **Progeny Vivid > Test Capture Button** to verify that the image capture button is working.

 On the Progeny Vivid Camera Testing screen, click Game Port, or from the Start menu, select Progeny Vivid > Test Capture Button. The Game Controllers screen will appear.

- 3. While this window is in the foreground, press and release the capture button on the Vivid Camera Handpiece. The "1" button should flash
- 4. When you are finished, click **OK**.

Installing the Vivid Camera with Progeny Imaging

In order to use the Vivid camera with Progeny Imaging, the Vivid camera must be integrated with Progeny Imaging's video capture functionality.

- 1. Select a patient.
- 2. In the Progeny Imaging **Device** menu, select **Progeny Vivid USB Camera**.

- 3. Click the Video button. The Video window will appear.
- 4. Position the Vivid camera so that the region to image appears in the Video window.

Capture Images with Progeny Imaging

5. To capture the image, press then release the button on the Vivid camera, or click the **Capture** button in the Video window. The image will appear in the image area of the patient folder.

Installing the Vivid Camera with Patterson Eagle Soft Imaging

In order to use the Vivid camera with Patterson Imaging, the Vivid camera must be integrated with Patterson's video capture functionality.

1. Log into Patterson Imaging.

2. From the File menu, select General Preferences.

Integrate with Patterson Eagle Soft Imaging

Adjusting Color

Computer monitors vary widely in their colors settings, so you must adjust the color settings on your computer, in order to obtain the most realistic patient images. The Vivid camera comes with a Color Test Chart for use in this procedure. With the Vivid camera connected and operating, you will use the AMCap software and the Color Test Chart to adjust the computer's color settings.

Note: More precise color adjustments can be obtained using a blue-only switch. See the Color Calibration procedure on page 40.

Use AMCap 1. Run AMCap from the computer's Start menu byselecting Progeny Vivid >Test Video with AMCap.

Color Calibration with a Blue-only Switch

	For precise color calibration of the Vivid camera, use a VGA Blue-only switch (technician supplied). The Vivid camera comes with a Color Test Chart for use in this procedure. With the Vivid camera connected and operating, you will use the AMCap software and the Color Test Chart to adjust the computer's color settings.
	Note: If you do not have a Blue-only Switch, use the Adjusting Color procedure on page 36.
Connect the Blue-only Switch	 Connect the VGA Blue-only switch to the computer's VGA connector. Connect the VGA cable to the Blue-only switch. The Blue-only Switch should be in the Off position.
Use AMCap	 Run AMCap from the computer's Start menu by selecting Progeny Vivid >Test Video with AMCap.
	AMCAP - C:Wocuments and Settings\VicWesktop\test.avi
	File Devices Options Capture Help
	Progeny Vivid USB Camera
	 From the Devices menu, select Progeny Vivid USB Camera. The image from the camera will appear in a window like the one above. From the Options menu, select Preview. Note: If the image appears as if in a mirror, flip the image using Options > Video Capture Filter
View the Color Test Chart	 Adjust the position of the camera to view the Color Test Chart. The camera should be positioned so only the chart fills the entire video frame.
	Note : Turn off any overhead lighting that may cause a reflection in the chart image. Glare from the Vivid camera light source will remain but does not interfere with the color adjustment procedure.

2. Click on the Video Proc Amp tab.

Infection Control

Cleaning and Disinfecting

The Vivid camera is to be considered a CDC classified "semi-critical" dental instrument and should be treated as such. The camera must be disinfected between each patient and a barrier sheath must be placed on the handpiece for every oral examination. The design of the handpiece does not permit sterilization, so cleanliness must be maintained by disinfection between each use.				
WARNING! DO NOT HEAT STERILIZE OR AUTOCLAVE ANY PART OF THE VIVID CAMERA, AS THIS WILL DAMAGE THE OPTICS AND VOID THE WARRANTY. DO NOT SUBMERGE THE HANDPIECE IN ANY LIQUIDS.				
ogeny Dental recommends using glutaraldehyde based disinfectant products hich are registered with the EPA. When using glutaraldehyde disinfectants, it I be necessary to also clean any remaining glutaraldehyde from the handpiece th sterile water. This additional step prevents discoloration and corrosion. utaraldehyde disinfectants have a limited shelf and use life. Follow the emical manufacturer's guidelines to ensure the cleaning action of the product. utaraldehyde products produce toxic fumes and can cause skin injuries. Wear propriate personal protection equipment and follow the manufacturer's safety idelines while handling the product. Store the disinfectant in a properly entified, closed container. Dispose of contaminated disinfectant in accordance				
 th state and local requirements. tween each patient, perform the following cleaning and disinfecting steps. Put on personal protection equipment. Remove and dispose of the sheath. Consider the sheath to be contaminated with bio-burden. Dispose of the sheath in accordance with state and local laws. Disconnect the Vivid camera from its cable or cable from the Interface Module. Consider the camera to be contaminated with bio-burden. Wipe the handpiece and cable with a gauze sponge moistened with sterile water to remove gross bio-burden. Note: The Vivid camera is not waterproof. Only use moistened, not saturated, gauze sponges. Dispose of contaminated sponges in accordance with state and local laws. Wipe the handpiece and cable with a gauze sponge moistened with a glutaraldehyde disinfectant. 				

Use Sanitary Sheaths

Sanitary sheaths are essential to prevent infection. Follow the procedure below to use sanitary sheaths.

1. Insert handpiece between the second and third layers with the light source and lens facing towards the white paper backing.

2. Gently push the handpiece completely in to the sheath. Grasp the blue edge of the top layer, pull it back and discard.

3. Peel away the white paper backing. The sheath is now seated on the handpiece. Make sure the sheath is fitted snugly around the lens area. Keep the sheath loosely fitted on the remainder of the handpiece to allow for easy operation of the capture button.

4. Use each sheath only once. To remove the sheath, peel or push it off of the handpiece. Treat it as medical waste according to the applicable laws in your area.

Specifications

Vivid Intraoral USB Camera

ī.

Power Input	5 Volts supplied by USB port 50-60 Hz PAL or NTSC format				
Light Source	8 high intensity, color balanced LEDs				
Light Intensity	1120-1400 mCD				
Optics Focus Type	Glass				
Image	Video: Resolution Type Scanning Output Signal	Sony ¼" CCD Chip NTSC—525 lines; PAL—625 lines True 2 to 1 interlaced USB Video, 640 x 480 -NTSC, 720 x 576 -PAL			
Focal Range	6 mm to 90 mm				
Angle of View	Field of View Viewing Angle	45 90			
Dimensions	Handpiece length Handpiece diameter Cable length Module	20 cm 25 mm 2 m (6.56 ft), optional cable length 10 ft. and 30 ft. 12.7 cm x 6.6 cm x 2.5 cm			
Weight	System total Handpiece	0.6 kg 80 g			
Safety					
Camera Operating Temperature	+10 to +40 ° C (+50 to -	+104°F)			
Storage Temperature	-30 to +85° C (-22 to 185° F)				
Relative Humidity	5% to 95% non-condensing				
Altitude	0-10,000 feet				
Cooling	Convection cooling to a	mbient air			
EMC Ratings	Complies with following EN60601-1 Produc EN60601-2 EMC In EN55011-Class B E 93/42/EEC-Europe	standards: t Safety nmunity EMC Radiated and Conducted Noise an Medical Device Directive			

Warranty and Service

Warranty and Service Information

Warranty Card	A separate Limited Warranty card has been included with your camera. Please complete and return the warranty registration card immediately to validate your warranty and receive technical support.
Extended Warranty	Extended Warranty Options are available. For more details, contact Progeny or your dealer.
Returning Equipment for Service	Save all original boxes and packing materials. In the event that you must return the Vivid camera for service, always ship the system in the original boxes to prevent damage.

Regulatory Compliance

EMC Statement

	This equipment has been tested and found to comply with the limits for a Class A digital device, per the requirements of EN550022. These limits are designed to provide a reasonable protection against harmful interference in residential or commercial installations.
	 This equipment generates, uses and can radiate radio frequency energy and if not installed and used in accordance with the instructions, may cause harmful interference with radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the unit off and on, the user is encouraged to try to correct the interference by one or more of the following measures: Reorient or relocate the receiving antenna. Increase the separation between the equipment and receiver. Connect the equipment to an outlet on a circuit different from that to which the receiver is connected. Consult the dealer or an experience radio/TV technician for help.
	Note: Only peripherals complying with EN 550022 Class A limits may be attached to this intraoral video unit. Operation with non-compliant peripherals or peripherals not recommended by Progeny is likely to result in interference to radio or TV reception. Changes or modifications to this equipment not expressly approved by Progeny or parties authorized by Progeny could void the user's authority to operate the equipment.
	 This device complies with EN550022. Operation is subject to the following two conditions: This device may cause harmful interference. This device must accept any interference received, including interference that may cause undesired operation.
